INTRODUCTION

This biennial report of "Municipal Water Facilities in Communities of 25,000 Population and Over in the United States and Its Possessions" reflects an important segment of the basic data collected by and fundamental to the Federal Government's program of water supply and pollution control. The inventory is obtained through the cooperation of State Health Departments and local officials.

In recent years there has been increasing concern in most parts of the Nation over water shortages and development of the water resources for maximum use. This report provides a continuing and ready source of reference as to how successfully the Nation's cities are meeting their growing water supply needs through construction of the necessary physical facilities. Such data are useful to industry and other private agencies and to all levels of government, particularly the larger cities, in planning for population growth, for industrial expansion, and for national emergencies. Only by maintaining this type of up-to-date basic data can orderly planning proceed for broad development of the water resource.

For the purposes of the following discussion, each item listed is defined as an "entry". Community Facility, and district names appear in alphabetical order.

Columns 1 and 11 - Community Facility or District

Entries marked with a lozenge (□) have facilities which serve one or more additional communities.

Column 2 - 1960 Population, Estimated Population Served

Top-line Entry - 1960 population (U.S. Bureau of the Census).

Bottom-line Entry - estimated total number of people served by the facility.

Column 3 - Year Operation Started

Top-line Entry - Present Supply.....the year the present source of supply was put into service, or the latest year during which a new or additional source was developed.
Bottom-line Entry - Present Treatment Plant.....the year the present treatment plant was put into operation, or the date of the latest major revision or addition.

Column 4 - Ownership

M - Public (Federal, State, county, municipal, district, etc.)
P - Private (private corporations, companies, institutions)
B - Both private and public

Column 5 - Number of Services, Number of Meters

Top-line Entry - Number of accounts served by the facility.
Bottom-line Entry - Number of meters used in the water system.

Column 6 - Source of Supply

The source or sources from which water is obtained. Specific lakes or streams named when possible.

Column 7 - Storage, Impounded and Raw Water

Top-line Entry - Impounded.....run-off held in storage to spillway of dams.
Bottom-line Entry - Raw Water.....storage of raw water after transmission.

Column 8 - Safe Yield, Impounded (Surface)
Maximum Dependable Draft, Ground Water

Top-line Entry - Safe Yield, Surface, the maximum safe daily yield which can be secured from the source of water supply based on the driest period of record.
Bottom-line Entry - Maximum Dependable Draft, Ground Water.....the maximum dependable 24-hour draft of a well field or fields, or other ground source, which can be sustained for a period of high demand through five days. (Number of wells now in use may have no bearing on this figure.)
The designation "No Limit" signifies a relatively large or unlimited supply.

Column 9 - Transmission Capacity

The maximum dependable capacity of a long aqueduct or pipeline bringing water from distant impoundment or other source.

Column 10 - Treatment

Where the treatment is at all extensive one or more symbols identifying the general type or function of the plant precede those used to identify the particular treatment plant or method. In general, a plant is not classified as a "purification plant" unless filters having fine granular material (sand or anthracite) are used. The first symbol of each grouping designates the principle treatment classification and following symbols define the type of treatment within the classification. In general, the symbols are arranged in the order in which treatment occurs. Combination units performing more than one function in a single structure are denoted by enclosing the appropriate symbols in parentheses. Enclosures in slashes indicate parallel or alternate operation. Natural fluorides are shown enclosed in parentheses.

P - Purification
H - Softening
I - Iron or Manganese removal

Treatment or Device

A - Aeration
AC..contact beds or trays, coke or other material
AM..patented aerator
AS..spray aerator
AT..overflow trays cascade or other splash aerator
AO..other type aerator

C - Chemical dosage for coagulation of softening
CA..alum
CI ..iron salts
CL..lime
CS..soda ash
CT..activated silica
CO..other coagulant

Treatment or Device (continued)

D - Disinfection
DC..chlorine gas
DD..dechlorination
DH..hypochlorites
DS..free residual chlorine
DX..chlorine dioxide
DZ..ozone
DO..other means

F - Filters
FA..anthrafilt
FC..roughing or contact
FD..diatomaceous earth
FG..gravity (slow)
FP..pressure
FR..gravity (rapid)
FS..sand
FZ..zeolite

K - Chemical dosage for corrosion correction or water stabilization
KC..phosphate compounds
KG..chlorine gas
KH..hypochlorite
KO..sodium silicate
KP..alkali feed for pH adjustment

M - Mixing device or tank
MA..air agitation
MB..baffle mix
MH..hydraulic (standing wave flume)
MI..injection or pump suction
MP..slow mechanical mix
MS..patented sludge blanket
MT..rapid mechanical mix
(MTPS SV).."Liquon Reactor"; "Accelator"; or Precipitator"

N - Ammoniation
NC..ammonium compound
NG..ammonia gas

R - Recarbonation

S - Sedimentation
SB..basins, baffled (other than inlet or outlet)
SC..covered basins (other than housed)
SM..mechanical sludge removal
SO..open basin (may be in plant building)
SV..upflow cylindrical tanks
(MTPS SV).."Liquon Reactor"; "Accelator"; or "Precipitator"

Treatment or Device (continued)

T - Chemical taste and odor control
TC..activated carbon
TD..chlorine dioxide
TS..sulfur dioxide
TZ..ozone
TO..other

V - Fluoride adjustment
VA..hydrofluosilicic acid
VS..sodium silicofluoride
VT..sodium fluoride
VE..ammonium silicofluoride
VO..other fluorides
V...fluoride reduction
V 1.2 - 1.2 ppm natural fluoride

Column 12 - Treatment Plant
Rated Capacity and Overload Capacity

Top-line Entry - Rated Capacity..the maximum rated daily capacity on the basis of filters, pumps, or other limiting factor.
Bottom-line Entry - Overload Capacity..the maximum production capacity of the plant in 24 hours.

Colums 13 and 14 - Plant Output
Maximum Hour, Day, & Month, and Average

13. Top-line Entry - Average..the average daily output.
Bottom-line Entry - Maximum Day..the maximum day delivery of record in recent years.

14. Top-line Entry - Maximum Month..the total water used in the maximum month of record in recent years.
Bottom-line Entry - Maximum Hour..the maximum hour delivery of record in recent years.

Columns 15 and 16 - Average Plant Output by
Domestic, Commercial, Industrial, and Public Uses

15. Top-line Entry - Domestic..water used in the home for any purpose. Homes to include houses, apartments, and trailer camps.

Column 15 (continued)

Bottom-line Entry - Commercial..water used in stores, office buildings, restaurants, garages, and other places of business or service for any purpose.

16. Top-line Entry - Industrial..water used for the purposes of manufacturing, mining, processing or producing any materials or products, or for the production of power by steam.

Bottom-line Entry - Public & Other..water used by swimming pools; hydrants, including fire fighting, drinking and other fountains; street washing; schools or institutions, either public or private; leakage and unaccounted-for water.

Column 17 - Laboratory Control

Refers to control by a plant laboratory, not to samples analyzed elsewhere.

N - None
C - Chemical (other than chlorine residual)
B - Bacteriological
A - Both

Column 18 - Pumping Capacity, Raw and Finished Water

Top-line Entry - Raw Water..pumpage to a treatment plant prior to treatment.

Bottom-line Entry - Finished Water..pumpage from treatment plant or clear water storage or wells into the distribution system.

Column 19 - Distribution Storage

Top-line Entry - Pumped to Mains..storage of finished water in the distribution system area that must be pumped into mains (clearwells, underground or low level storage, etc.)

Bottom-line Entry - Elevated..storage of finished water in the distribution system area that will flow into mains by gravity (elevated tanks, standpipes, high level reservoirs, etc.).

Water storage in impounding reservoirs or balancing reservoirs on long supply conduits not included.

Column 20 - Will Distribution System Satisfy Maximum Demand?

Affirmative or negative replies only.

Column 21 - Improvements Needed

Improvements currently needed to provide adequate service. The following code is used.

N - None	T - Treatment
U - Source, underground	G - Ground storage
S - Source, surface	L - Elevated storage
M - Transmission	D - Distribution system
P - Pumping	O - Other

An "x" in the listing indicates that the data requested was unknown or was not supplied.

A dash, "-" signifies the item does not apply.

APPENDIX

DISTRIBUTION CHARTS

The following charts are included in this inventory as:

1. An aid in analyzing the data.
2. A pictorial description of the complex systems and source developments.
3. Assistance to the non-technical reader to more fully understand the data.

This section of charts is not complete by any means, for there exist many complex systems. It is, however, our aim to include each year, more of these charts as they become available.
